## **Astronomy Equations**

### Chapter 1 Measuring Distance

| $parallax = \frac{360}{2\pi} x \frac{baseline}{distance}$ | $diameter = distance \mathbf{x} \frac{angular \ diameter}{57.3}$ | $distance = baseline \ x \frac{57.3}{parallax}$ |
|---|--|---|
|---|--|---|

### Chapter 2 Copernican Revolution

| $p^2(in \ earth \ years) = a^3(in \ Au's)$  | $F = \frac{Gm_1m_2}{r^2}$ | F = ma                               |
|---|---------------------------|--------------------------------------|
| $p^2(\text{in earth years}) = \frac{a^3(\text{in Au's})}{M_{total}(\text{in solar units})}$ | $a = \frac{v^2}{r}$       | $v_{escape} = \sqrt{2 \frac{GM}{r}}$ |
| $V = \sqrt{\frac{GM}{r}}$   |                           |                                      |

## Chapter 3 Radiation

| $frequency = \frac{1}{period}$  | $Velocity = \frac{wavelength}{period}$   | Velocity = wavelength x frequency   |
|---|--|---|
| Wavelength of peak emission $\alpha \frac{1}{temp}$   | total energy emission $\alpha$ temp <sup>4</sup>   | $\lambda_{\max} = \frac{2.9 \text{mm}}{\text{T}}$   |
| $F = \sigma T^4$  | $L = 4\pi\sigma R^2 T^4$<br>OR luminosity a radius(solar radii) <sup>2</sup> x<br>tempurature(units of 5800K) <sup>4</sup> | $\frac{\text{Apparent wavelength}}{\text{true wavelength}} = \frac{\text{true frequency}}{\text{apparent frequency}}$ |
| $\frac{\text{Apparent wavelength}}{\text{true wavelength}} = 1 + \frac{\text{recession velocity}}{\text{wave speed}}$ | $\frac{\text{Apparent wavelength}}{\text{true wavelength}} = \frac{\text{recession velocity}}{\text{wave speed}}$          | $\frac{\text{change in wavelength}}{\text{true wavelength}} = \frac{\text{recession velocity}}{\text{wavespeed}}$     |
| $\frac{\text{recession velocity}}{\text{wavespeed,c}} = \frac{\text{change in wavelength}}{\text{true wavelength}}$   |  |   |

Chapter 4 Spectroscopy

E = hf

Chapter 5 Telescopes

|         |             |           | 0.25  | vavlength(µm) |
|---------|-------------|-----------|-------|---------------|
| Angular | resolution( | [arcsec)= | 0.25- | dia           |

diameter(m)

#### Chapter 6 The solar system

| Linear momentum = mass x velocity | Angular momentum $\alpha$ mass x rotation rate x radius <sup>2</sup> |
|-----------------------------------|--|
|-----------------------------------|--|

 $E_n = 13.6(1 - \frac{1}{n^2})(ev)$ 

# **Astronomy Equations**

| Chapter 7                           | Earth   |   |  |   |  |
|-------------------------------------|---|---|--|---|--|
|                                     | Scattering by dust $\alpha \frac{1}{wavelength}$  | Scattering by molecules $\alpha \frac{1}{wavelength^4}$     |  | Fraction of material remaining $=\frac{1}{2}^{\frac{t}{T}}$   |  |
| Chapter 8                           | The Moon and Mercury  | •   | -  |   |  |
|                                     | Avg. molecular speed $\left(\frac{km}{s}\right) = 0.157 \sqrt{\frac{gas \ temp.(k)}{molecular \ mass}}$ |   | $Escape \ speed(\frac{km}{s}) = 11.2\sqrt{\frac{mass \ of \ body}{radius \ of \ mass}}$    |   |  |
| Chapter 16                          | The Sun   |   |  |   |  |
|                                     | $\frac{\text{Solar luminosity}}{\text{solar mass}} = 2 \text{ x } 10^{-4} \frac{\text{W}}{\text{kg.}}$  |   | $E = mc^2$   |   |  |
| Chapter 17                          | The Sun   | -   | •  |   |  |
|                                     | $Distance(parsecs) = \frac{1}{parallax(arcseconds)}$  | Apparent brightness(<br>luminosity<br>distance <sup>2</sup> | energy flux) α   | Apparent magnitude – absolute magnitude = $5log_{10} \frac{distance}{10pc}$   |  |
|                                     | $L(solar units) = 10^{-(M-4.83)/2.5}$   | $R = rac{\sqrt{L}}{T^2}$                                   |  | Stellar lifetime α. stellar mass<br>stellar luminosity  |  |
|                                     | Stellar lifetime $\alpha \frac{1}{(stellar mass)^3}$  |   |  |   |  |
| Chapter 22                          | Chapter 22 Neutron Stars and Black Holes  |   |  |   |  |
|                                     | $Deflection(arc \ sec.) = 1.75 \frac{M(solar \ masses)}{R(solar \ radii)}$                              |   |  |   |  |
| Chapter 23                          | Chapter 23 The Milky Way Galaxy   |   |  |   |  |
|                                     | $Total mass (solar masses) = \frac{orbital size (Au)^3}{orbital period (years)^3}$                      |   |  |   |  |
| Chapter 24                          | Chapter 24 Galaxies   |   |  |   |  |
|                                     | <i>Recessional velocity</i> = $H_0 x$ <i>distance</i>   |   | $Redshift = \frac{observered}{c}$  | $\frac{wave \ length-true \ wavelength}{true \ wavelength} = \frac{recessional \ velocity \ (v)}{speed \ of \ light \ (c)}$ |  |
| Chapter 25 Galaxies and Dark Matter |   |   |  |   |  |
|                                     | $Time = \frac{distance}{velocity} = \frac{1}{H_0}$  |   | $\frac{1 \text{ Joule}}{(3 \times 10^8 \frac{\text{m}}{\text{s}})^2} = 1.1 \times 10^{-3}$ | <sup>17</sup> kg  |  |
| Chapter 27 The Early Universe       |   |   |  |   |  |
|                                     |   | C   | $=\lambda f$   |   |  |
